

1. Start by removing the intake from the inlets.

2. Pull up the spring clips holding the breather connectors to the inlets.

3. The inlets can be removed by pulling up the spring clips around the turbo flanges.

4. Remove the inlets from the turbos.

5. Remove the spring clip and the internal gasket from the inlets. Note the orientation of the gasket. It needs to go back into the carbon inlets in the same orientation.

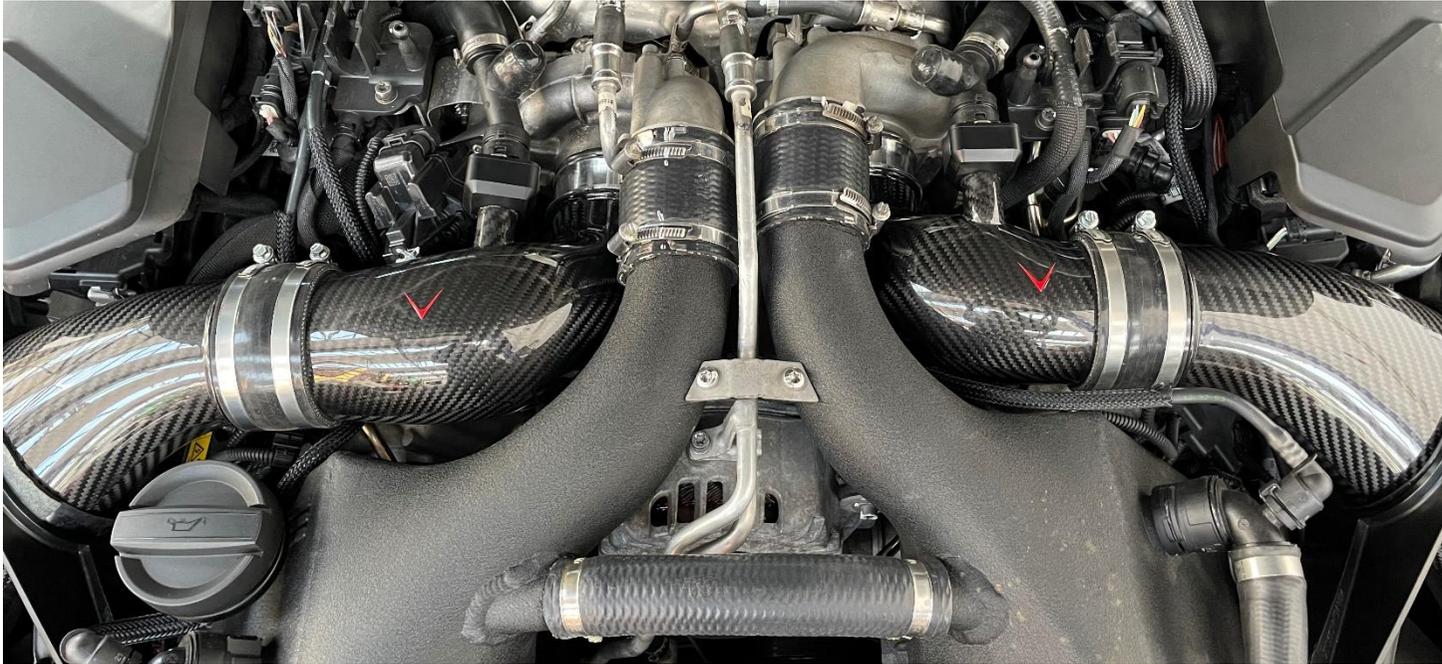

6. Insert the spring clip onto the machines flange with the top of the clip positioned over the raised section. Also insert the O-ring inside the flange as shown. The tapered face of the gasket should face the turbo.

7. Push the inlets into place and secure with the clip. Connect the breather tube back into place and secure.

8. Now the intake can be installed back into place.

You have now completed the installation of the Eventuri F90 M5 Inlets.

Eventuri cannot take responsibility for an incorrectly installed intake or any damage caused during installation.
